Nara Institute of Science and Technology
Basic Strategy for International Exchange

The Nara Institute of Science and Technology (hereafter referred to as "NAIST"), as a national graduate university, aims to contribute to advancing science and technology and developing society through cutting-edge research, the outcomes of which also promote advanced graduate education. One of the goals of the "Co-creation" embraced in the NAIST President's Vision 2030 is to advance education and research through collaboration with universities and research institutions domestically and abroad.

In line with the university mission and the president's vision, the Basic Strategy for International Exchange focuses on actions to strive for academic excellence in the fields of science and technology toward further development of NAIST and its intellectual contributions to the global community.

Promote cutting-edge research through international collaboration.

Through our network of overseas educational and research institutions, NAIST will explore and elucidate problems on the frontier of science and technology from a global perspective to develop world-leading, cutting-edge research.

Nurture the next generation of global leaders.

NAIST will promote the exchange of talented researchers and international students from overseas and prepare them to tackle global issues with highly developed expertise in an inclusive campus environment that attracts diverse researchers and students from around the globe.

Pursue intellectual contributions to the global community.

NAIST will contribute to the development of the global community by disseminating significant research outcomes and fostering future innovators and leaders, while strengthening overseas networks to promote our international visibility.
